

Energy taxes 2005

euro  gas

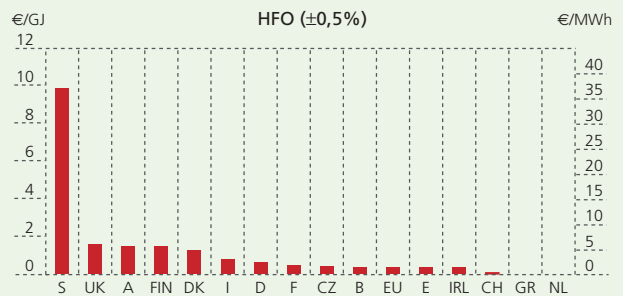

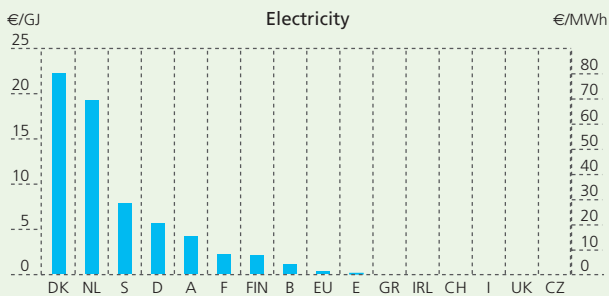

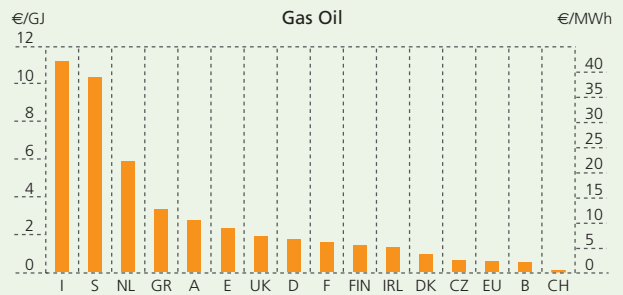

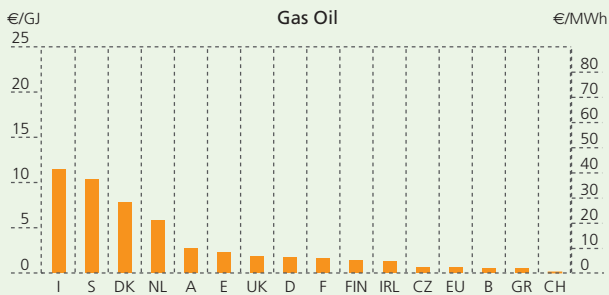

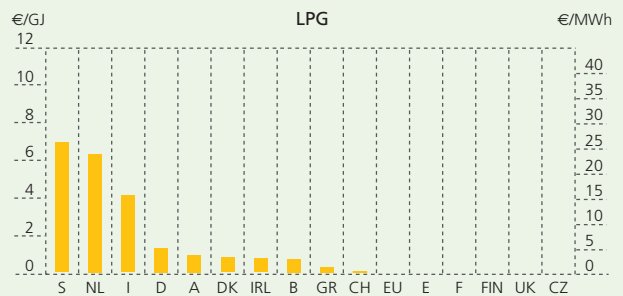

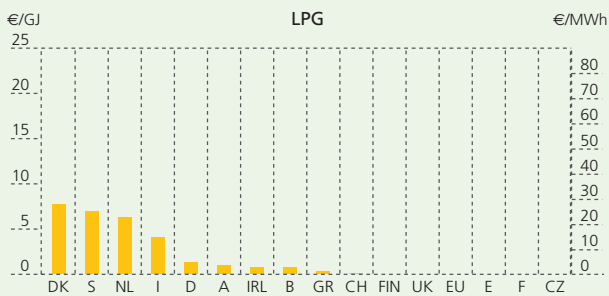

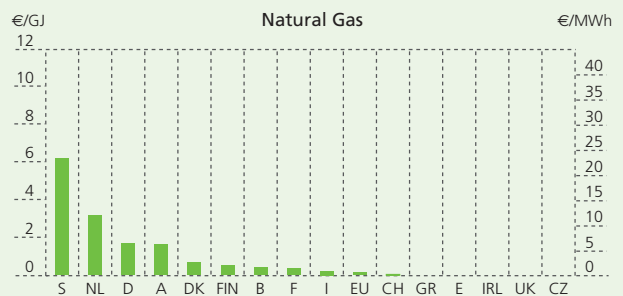

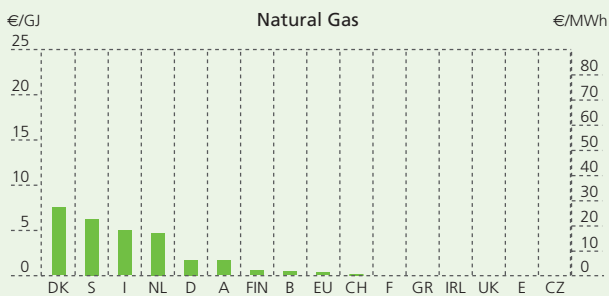

Energy taxes

These tables give a comparison between taxation levels of competing sources of energy (at. 1.1.2005).

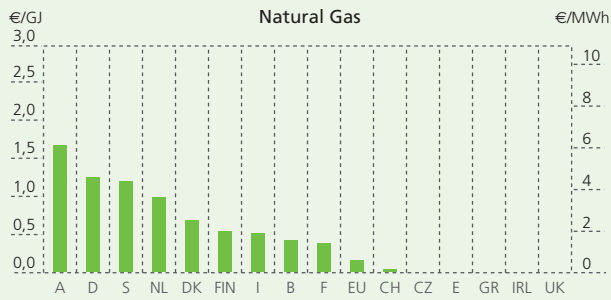

All types of energy taxes (directly levied on the energy sold/consumed) are covered, regardless of their names and professed objectives, except taxes on motor fuel.

Residential sector

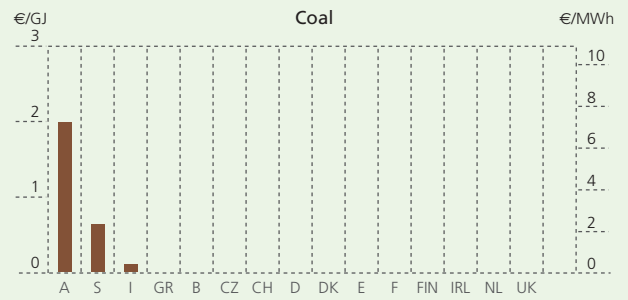

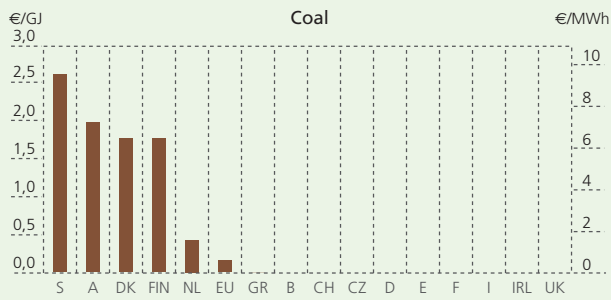

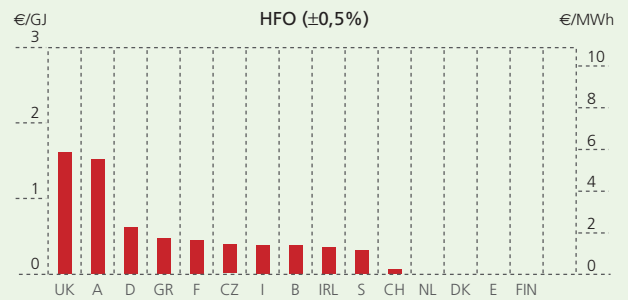

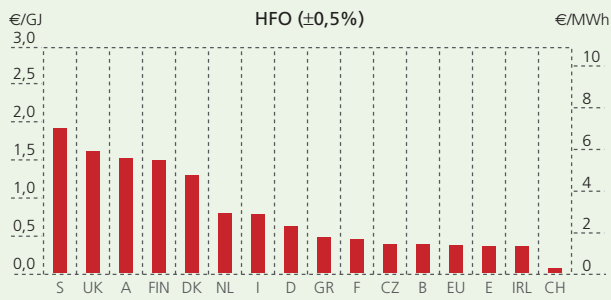

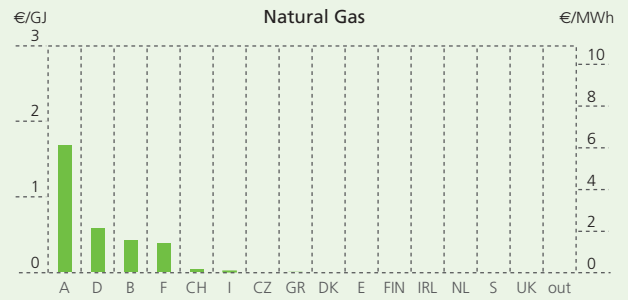

Commercial sector

Industrial sector

Power generation sector

Note : The levels shown for EU are minimum taxation levels fixed in the Directive on taxation of energy products.
